Question: 1. A Fan Cart Is Placed On A Horizontal Track; Mass M Is Hanging From A Light Inextensible String Connected To The Fan Car. When Put On “high Speed” Setting, The Fan Blows Air Toward Left As Shown, You Measure The Fan Car Is Accelerating At $A = 2.0 \text{ m/s}^2$ When Released From Rest.

Student Exploration- Fan Cart Physics (ANSWER KEY) by ...

The fan has three speeds for studying the effect of variable thrust. Two mass bars let you change the total mass of the cart to observe how mass affects acceleration. The fan turns on a protractor base, allowing the thrust to be directed at a known angle from the direction of travel.

Gain an understanding of Newton's Laws by experimenting with a cart (on which up to three fans are placed) on a linear track. The cart has a mass, as does each fan. The fans exert a constant force when switched on, and the direction of the fans can be altered as the position, velocity, and acceleration of the cart are measured.

The experiments demonstrate Newton's first law because the fans act as the unbalanced force. If the fan is blowing in one direction, it will make the cart accelerate, and if there are two fans blowing in opposite directions, the cart will remain at a constant velocity because it is a balanced force.
