methodologies of Buddhism and of Western science are capable of being integrated into a single discipline: contemplative science.

Contemplative Science: Where Buddhism and Neuroscience

The science of consciousness introduces first-person methods of investigating the mind through Buddhist contemplative techniques, such as samatha, an organized, detailed system of training the attention. Just as scientists make observations and conduct experiments with the aid of technology, contemplatives have long tested their own theories with the help of highly developed meditative skills of observation and experimentation.

What is Contemplative Science?

Contemplative Science, a term coined by Dr B Alan Wallace, is the bridge between the empirical study of the science of consciousness and the subjective, experiential study of consciousness through contemplation. The science of consciousness introduces first-person methods of investigating the mind through Buddhist contemplative techniques, such as samatha, an organized, detailed system of training the attention.
