Chapter: Stars and Galaxies

an astronomer trying to measure the distance a star is from Earth. Apparent magnitude is much different from the absolute magnitude, which is the true measure of how much light the star emits. These two variables control the brightness of the stars we see in our night sky. The absolute magnitude is not the same for every star.

Reinforcement Evolution Of Stars Answers

1. A star's color indicates its temperature. A red star is cool, a yellow star is medium in temperature, and a blue-white star is hot. 2. A large star that begins to use up the fuel in its core expands to become a supergiant. In time, its core collapses, and the star explodes, becoming a supernova. The star's core, if it's not too large,
